ANTERIOR CERVICAL CAGE

7S medical
Swiss Experts in Orthopedics.
ANTERIOR CERVICAL CAGE

1. Axial window design for bone graft or bone graft substitute material. Allows bone fusion to occur through the implant cage.

2. Heights are available from 5 – 10 mm in 1 mm increment for titanium and 6 – 10 mm for Peek. Width 15.2 mm and width 12.6 mm.

3. X-Ray Marker for Peek cages allows 3D visualization and radiological identification.

4. Pyramidal serration for better anchorage in the adjacent vertebral endplates. Provide resistance to implant migration and reduce the risk of implant expulsion.

5. Cervical cages are available in Titanium and PEEK. Titanium cages have a curved or wedge shaped design.

6. Material
   - Titanium Alloy, PEEK
